

WHY PRPHD KIT TREATMENT?

In all things of nature, there is something of the marvellous; If you look deep enough, you will understand everything better, and if you look within yourself you will find that inside you lies natural components that can regenerate your body and heal your wound naturally.

Platelet Rich Plasma is your body's **hidden potential** that once harvested using a special PRP device is reinjected to the targeted area you want to regenerate, it is a minimally invasive procedure and has no risk of rejection as your own cells do the work for you,

Platelets contain hundreds of proteins called growth factors which are very important in the healing of injuries, therefore a **special device** is needed to make sure all those growth factors are concentrated in the PRP.

Using **PRPHD kit**, the ultimate device to collect all those growth factors without any loss; your doctor will draw your blood then separate the platelets from the other cells.

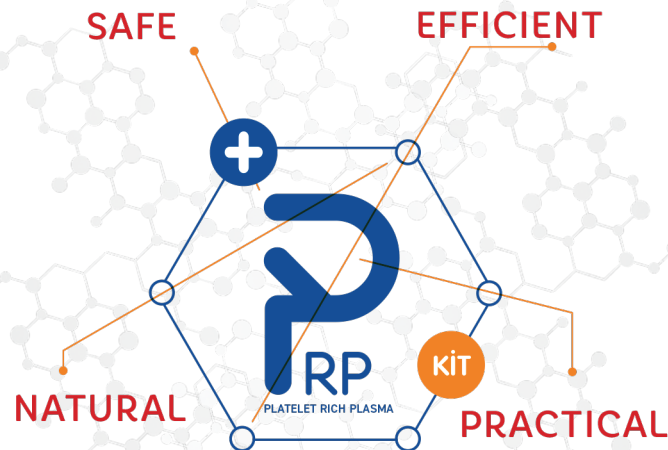

The most important thing is, separate the blood cells without losing the platelets, many devices lose more than half of the platelet during the process, however **PRPHD** makes sure your injection contains the maximum amount of platelets along with growth factor you need to regenerate at your full capacity.

PRPHD,

helps you recover quickly providing you with the most accurate platelet ratio you need.

PRP for **Skin Regeneration**
and **Hair Growth**
The vitality comes from your own cells

Who can benefit from PRP?

Patients of any age can benefit from PRP, there is no age restriction, everyone can use the vitality of their own cells to regenerate themselves and reverse the aging process. Advantages of using an autologous PRP include no risk of cross reactivity, immune reaction or disease transmission. However we do not recommend this treatment to patients with blood disorder and cancer.

What should I expect ?

Experiencing a Slight redness ,swelling or tenderness after your injection?

It is quite normal, do not be alarmed it is expected as the platelets have been activated,

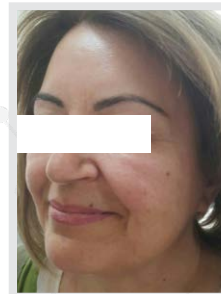

It is just temporary and disappears within a few days (1-3).

The stimulative effect of PRP on fibroblasts was demonstrated years ago by in vitro studies. PRP stimulates the secretion of hyaluronic acid and type 1 procollagen in skin fibroblasts. A number of clinical studies have been published describing the positive effects of PRP on the appearance of the skin. Researches reported improved skin texture, color homogeneity, firmness and elasticity, increased volume, dermal thickness and patient satisfaction, reduced solar elastosis, decreased wrinkles, severity of nasolabial folds, acne scars, erythema and melanin after solely facial application of PRP

Clinic Experience

A Touch of youth to your look.

After a few sessions you will start seeing the difference in your skin tone and your appearance, feel the power of your own cells.

How does it work?

Your doctor draws blood from you then centrifuge it using a special PRP device, the platelet rich plasma is then extracted and reinjected into the targeted area, this procedure is minimally invasive and virtually painless. Make sure the device your doctor uses has a Class IIb certificate, using non certified PRP devices is dangerous as they have not been tested nor developed to be used for PRP injections. **PRPHD** is a **Class IIb** certified medical device, specially designed for the sole purpose of safe and efficient PRP injections.
